BEA 03-37

GROSS DOMESTIC PRODUCT: SECOND QUARTER 2003 (FINAL) CORPORATE PROFITS: SECOND QUARTER 2003 (REVISED)

Real gross domestic product -- the output of goods and services produced by labor and property located in the United States -- increased at an annual rate of 3.3 percent in the second quarter of 2003, according to revised estimates released by the Bureau of Economic Analysis. In the first quarter, real GDP increased 1.4 percent.

The GDP estimates released today are based on more complete source data than were available for the preliminary estimates issued last month. In the preliminary estimates, the increase in real GDP was 3.1 percent (see "Revisions" on page 3).

The major contributors to the increase in real GDP in the second quarter were personal consumption expenditures (PCE), federal defense spending, and nonresidential fixed investment. The contributions of these components were partly offset by a negative contribution from private inventory investment. Imports, which are a subtraction in the calculation of GDP, increased.

The Bureau of Economic Analysis plans to release the results of its 12th comprehensive (or benchmark) revision of the national income and product accounts (NIPAs) on December 10, 2003. The annual revision of the NIPAs that would normally have taken place this summer will instead be combined with the upcoming comprehensive revision. An article in the June 2003 issue of the Survey of Current Business discussed the changes in definitions and concepts that will be implemented in the revision; an article in the August 2003 issue described changes in presentation, including new and redesigned tables; and an article in the September 2003 issue described changes in statistical methods.

NOTE.--Quarterly estimates are expressed at seasonally adjusted annual rates, unless otherwise specified. Quarter-to-quarter dollar changes are differences between these published estimates. Percent changes are calculated from unrounded data and annualized. "Real" estimates are in chained (1996) dollars. Price indexes are chain-type measures.

This news release is available on BEA's Web site at <www.bea.gov/bea/rels.htm>.

The acceleration in real GDP growth in the second quarter primarily reflected an upturn in federal defense spending, an acceleration in PCE, and an upturn in nonresidential fixed investment that were partly offset by an upturn in imports.

Final sales of computers contributed 0.18 percentage point to the second-quarter change in real GDP after contributing 0.18 percentage point to the first-quarter change. Motor vehicle output decreased in both the first and second quarters. Motor vehicle output subtracted 0.11 percentage point from the second-quarter change in real GDP after subtracting 0.06 percentage point from the first-quarter change.

The price index for gross domestic purchases, which measures prices paid by U.S. residents, increased 0.4 percent in the second quarter, 0.2 percentage point more than in the preliminary estimate; this index increased 3.4 percent in the first quarter. Excluding food and energy prices, the price index for gross domestic purchases increased 0.8 percent in the second quarter, compared with an increase of 1.8 percent in the first.

Real personal consumption expenditures increased 3.8 percent in the second quarter, compared with an increase of 2.0 percent in the first. Real nonresidential fixed investment increased 7.3 percent, in contrast to a decrease of 4.4 percent. Nonresidential structures increased 4.2 percent, in contrast to a decrease of 2.9 percent. Equipment and software increased 8.3 percent, in contrast to a decrease of 4.8 percent. Real residential fixed investment increased 6.6 percent, compared with an increase of 10.1 percent.

Real exports of goods and services decreased 1.0 percent in the second quarter, compared with a decrease of 1.3 percent in the first. Real imports of goods and services increased 8.8 percent, in contrast to a decrease of 6.2 percent.

Real federal government consumption expenditures and gross investment increased 25.5 percent in the second quarter, compared with an increase of 0.7 percent in the first. National defense increased 45.8 percent, in contrast to a decrease of 3.3 percent. Nondefense decreased 5.4 percent, in contrast to an increase of 8.4 percent. Real state and local government consumption expenditures and gross investment decreased 0.2 percent, in contrast to an increase of 0.2 percent.

The real change in private inventories subtracted 0.74 percentage point from the second-quarter change in real GDP after subtracting 0.82 percentage point from the first-quarter change. Private businesses reduced inventories \$17.6 billion in the second quarter, following an increase of \$4.8 billion in the first quarter and an increase of \$25.8 billion in the fourth.

Real final sales of domestic product -- GDP less change in private inventories -- increased 4.0 percent in the second quarter, compared with an increase of 2.3 percent in the first.

Gross domestic purchases

Real gross domestic purchases -- purchases by U.S. residents of goods and services wherever produced -- increased 4.4 percent in the second quarter, compared with an increase of 0.6 percent in the first.

Gross national product

Real gross national product -- the goods and services produced by the labor and property supplied by U.S. residents -- increased 3.5 percent in the second quarter, compared with an increase of 1.4 percent in the first. GNP includes, and GDP excludes, net receipts of income from the rest of the world, which increased \$5.9 billion in the second quarter after decreasing \$1.2 billion in the first; in the second quarter, receipts increased \$0.9 billion, and payments decreased \$5.0 billion.

Current-dollar GDP

Current-dollar GDP -- the market value of the nation's output of goods and services -- increased 4.3 percent, or \$114.3 billion, in the second quarter to a level of \$10,802.7 billion. In the first quarter, current-dollar GDP increased 3.8 percent, or \$99.6 billion.

Revisions

The final estimate of the second-quarter increase in real GDP is 0.2 percentage point, or \$3.9 billion, higher than the preliminary estimate issued last month. The upward revision to the percentage change in real GDP primarily reflected upward revisions to private inventory investment and to residential fixed investment that were partly offset by an upward revision to imports.

	<u>Advance</u> (Percent change from preceding quarter)	<u>Preliminary</u>	<u>Final</u>
Real GDP.....	2.4	3.1	3.3
Current-dollar GDP.....	3.4	4.0	4.3
Gross domestic purchases price index....	0.3	0.2	0.4

Corporate Profits

Profits from current production (corporate profits with inventory valuation and capital consumption adjustments) increased \$80.6 billion in the second quarter, according to revised estimates. In the first quarter, profits increased \$20.4 billion. Current-production cash flow (net cash flow with inventory valuation and capital consumption adjustments) -- the internal funds available to corporations for investment -- increased \$70.8 billion in the second quarter, in contrast to a decrease of \$4.0 billion in the first.

Domestic profits of financial corporations increased \$8.4 billion in the second quarter, compared with an increase of \$15.9 billion in the first.

Domestic profits of nonfinancial corporations increased \$70.5 billion in the second quarter, compared with an increase of \$12.1 billion in the first. In the second quarter, both real gross corporate product and profits per unit of real product increased. The increase in unit profits reflected larger decreases in the unit labor and nonlabor costs incurred by corporations than in the prices corporations received.

The rest-of-the-world component of profits increased \$1.7 billion in the second quarter, in contrast to a decrease of \$7.6 billion in the first. This measure is calculated as (1) receipts by U.S. residents of earnings from their foreign affiliates plus dividends received by U.S. residents from unaffiliated foreign corporations minus (2) payments by U.S. affiliates of earnings to their foreign parents plus dividends paid by U.S. corporations to unaffiliated foreign residents. The second-quarter increase was accounted for by a larger increase in receipts than in payments.

The revised estimate of second-quarter corporate profits from current production is \$7.7 billion lower than the preliminary estimate issued last month. The foreign component of profits (rest-of-the-world profits) was revised down \$7.9 billion. Domestic profits of nonfinancial and financial corporations were revised up \$5.9 billion and down \$5.8 billion, respectively.

Profits before tax with inventory valuation adjustment is the best available measure of industry profits because estimates of the capital consumption adjustment by industry do not exist. This measure reflects the depreciation-accounting practices used for federal income tax returns. According to this measure, both domestic profits of financial corporations and domestic profits of nonfinancial corporations decreased.

Profits before tax decreased \$27.9 billion in the second quarter, in contrast to an increase of \$33.2 billion in the first. The before-tax measure of profits does not reflect, as does profits from current production, the capital consumption and inventory valuation adjustments. These adjustments convert depreciation of fixed assets and inventory withdrawals reported on a tax-return, historical-cost basis to the current-cost measures used in the national income and product accounts. In the second quarter, the decrease in the before-tax measure of profits, in contrast to the increase in profits from current production, reflected the additional depreciation expenses used for federal income tax purposes as provided for by the Jobs and Growth Tax Reconciliation Act of 2003. As discussed below, profits from current production are not affected by the tax code changes.

Profits tax liability decreased \$3.5 billion in the second quarter, in contrast to an increase of \$15.4 billion in the first. Profits after tax decreased \$24.3 billion, in contrast to an increase of \$17.7 billion. Dividends increased \$7.9 billion, compared with an increase of \$7.3 billion; undistributed profits decreased \$32.2 billion, in contrast to an increase of \$10.4 billion.

Provisions of the Jobs and Growth Tax Relief Reconciliation Act of 2003

The Jobs and Growth Tax Relief Reconciliation Act of 2003 provided for an additional first-year bonus depreciation writeoff, increasing the immediate depreciation writeoff from 30 percent (provided for in the Job Creation and Worker Assistance Act of 2002) to 50 percent for property acquired after May 5, 2003, and placed in service before January 1, 2005.

The additional depreciation provided for by the 2003 act is estimated to have increased depreciation expenses in the second quarter by \$75.2 billion at an annual rate (\$18.8 billion at a quarterly rate) and reduced profits before tax, which is based on earnings reported on tax returns, by the same amount. The capital consumption adjustment is the difference between the depreciation specified in the tax code and the depreciation underlying profits from current production; because the act raised tax depreciation by \$75.2 billion, the capital consumption adjustment increased by the same amount. Profits from current production are not affected, because they do not depend on the depreciation-accounting practices used for federal income tax returns; rather, they are based on depreciation of fixed assets valued at current cost and using consistent depreciation profiles based on used-asset prices. The adjustments reduced second-quarter profits tax liability by \$18.8 billion at an annual rate (\$4.7 billion at a quarterly rate) and profits after tax by \$56.4 billion (see the Technical Note).

As with corporate profits from current production, the effects of the provisions of the act on nonfarm proprietors' income with capital consumption and inventory valuation adjustments (tables 8 and 9) were offsetting; nonfarm proprietors' income without these adjustments was reduced, and the related capital consumption adjustment was increased, by the same amount. The other major national income and product account components and aggregates shown in this release were not affected.

r Revised.

NOTE.—Users are cautioned that particularly for components that exhibit rapid change in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series. For accurate estimates of the contributions to percent changes in real GDP, use table 2.

See "Explanatory Note" at the end of the tables.

Table 5.—Quantity and Price Indexes for Gross Domestic Product
 [Index numbers, 1996=100]

	2000	2001	2002	Seasonally adjusted				
				2002			2003	
				II	III	IV	I	II ^r
Gross domestic product:								
Chain-type quantity index	117.64	117.94	120.82	120.21	121.41	121.82	122.26	123.25
Chain-type price index	106.89	109.42	110.66	110.48	110.76	111.25	111.90	112.18
Implicit price deflator	106.89	109.42	110.66	110.48	110.76	111.25	111.90	112.18
Personal consumption expenditures:								
Chain-type quantity index	118.83	121.76	125.56	124.92	126.20	126.74	127.37	128.57
Chain-type price index	107.39	109.56	111.06	110.89	111.36	111.87	112.62	112.84
Durable goods:								
Chain-type quantity index	142.58	151.16	162.19	159.08	167.47	163.92	163.08	172.19
Chain-type price index	91.46	89.70	87.19	87.36	86.94	86.46	85.64	84.82
Nondurable goods:								
Chain-type quantity index	116.50	118.79	122.58	122.03	122.35	123.88	125.72	126.14
Chain-type price index	107.59	109.17	109.61	109.75	109.92	110.25	111.51	110.96
Services:								
Chain-type quantity index	115.67	117.98	120.63	120.32	121.01	121.66	121.92	122.35
Chain-type price index	110.85	114.32	117.44	117.00	117.88	118.74	119.64	120.57
Private fixed investment:								
Chain-type quantity index	139.52	134.20	130.06	129.68	129.60	130.99	130.94	133.20
Chain-type price index	100.00	101.16	100.76	100.76	100.52	100.95	101.44	101.21
Nonresidential:								
Chain-type quantity index	147.23	139.55	131.57	131.32	131.05	131.79	130.32	132.64
Chain-type price index	95.59	95.73	94.43	94.48	94.17	94.25	94.15	93.80
Residential:								
Chain-type quantity index	118.88	119.22	123.92	123.25	123.59	126.39	129.45	131.53
Chain-type price index	114.40	119.09	121.57	121.40	121.38	122.88	125.10	125.23
Exports of goods and services:								
Chain-type quantity index	130.09	123.10	121.13	121.89	123.28	121.44	121.04	120.75
Chain-type price index	96.83	96.10	95.87	95.58	96.41	96.62	97.55	97.75
Imports of goods and services:								
Chain-type quantity index	159.48	154.91	160.66	161.24	162.56	165.48	162.84	166.30
Chain-type price index	95.49	92.70	92.99	93.03	94.05	94.27	96.92	95.97
Government consumption expenditures and gross investment:								
Chain-type quantity index	111.29	115.36	120.46	119.79	120.65	122.02	122.14	124.66
Chain-type price index	110.65	113.27	115.18	115.06	115.47	115.92	118.15	118.04
Federal:								
Chain-type quantity index	102.42	107.33	115.37	114.50	115.71	118.79	118.99	125.94
Chain-type price index	108.23	110.09	113.11	113.07	113.44	113.53	116.23	116.48
State and local:								
Chain-type quantity index	116.52	120.11	123.51	122.95	123.62	123.99	124.06	124.00
Chain-type price index	111.98	115.01	116.33	116.17	116.60	117.24	119.21	118.88
Addenda:								
Final sales of domestic product:								
Chain-type quantity index	117.19	118.95	121.09	120.49	121.51	121.84	122.52	123.74
Chain-type price index	107.02	109.55	110.80	110.62	110.91	111.40	112.08	112.36
Implicit price deflator	107.02	109.55	110.80	110.62	110.91	111.40	112.08	112.36
Gross domestic purchases:								
Chain-type quantity index	121.00	121.50	125.15	124.53	125.72	126.62	126.81	128.19

^r Revised. Revisions include changes to series affected by the introduction of revised wage and salary estimates for the first quarter of 2003.

1. Personal income is also equal to national income less corporate profits with inventory valuation and capital consumption adjustments, net interest, contributions for social insurance, and wage accruals less disbursements, plus personal interest income, personal dividend income, government transfer payments to persons, and business transfer payments to persons.

2. Equals disposable personal income deflated by the implicit price deflator for personal consumption expenditures.

^r Revised. Revisions include changes to series affected by the introduction of revised wage and salary estimates for the first quarter of 2003.

1. Effective November 26, 2002, the estimates of chained-dollar gross product of nonfinancial corporate business beginning with 1999 have been revised to reflect the 2002 revision to the gross product price indexes for non-financial industries.

2. Chained-dollar consumption of fixed capital of nonfinancial corporate business is calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100.

3. Chained-dollar net product of nonfinancial corporate business is the difference between the gross product and the consumption of fixed capital.

4. The deflator for gross product of nonfinancial corporate business divided by 100.

r Revised.

1. For some components of final sales of computers, includes computer parts.

2. Farm output less intermediate goods and services purchased.

3. Consists of GDP less gross product of farm, of housing, of households and institutions, and of general government.

See "Explanatory Note" at the end of the tables.

Explanatory Note: Measures of Output and Prices

This note describes the calculation of chain-type quantity and price indexes used in the NIPA's.

Changes in current-dollar GDP measure changes in the market value of goods, services, and structures produced in the economy in a particular period. These changes can be decomposed into quantity and price components. Quantities, or "real" measures, and prices are expressed as index numbers with the reference year--at present, the year 1996--equal to 100.

The annual changes in quantities and prices are calculated using a Fisher formula that incorporates weights from two adjacent years. (Quarterly changes in quantities and prices are calculated using a Fisher formula that incorporates weights from two adjacent quarters; quarterly indexes are adjusted for consistency to the annual indexes before percent changes are calculated.) For example, the 2000-01 annual percent change in real GDP uses prices for 2000 and 2001 as weights, and the 2000-01 annual percent change in GDP prices uses quantities for 2000 and 2001 as weights. These annual changes are "chained" (multiplied) together to form time series of quantity and price indexes. The Fisher formula produces percent changes in quantities and prices that are not affected by the choice of reference years. In addition, because the changes in quantities and prices calculated in this way are symmetric, in general, the product of a quantity index and the corresponding price index equals the current-dollar index. (BEA also publishes a measure of the price level known as the "implicit price deflator (IPD)," which is calculated as the ratio of current-dollar value to the corresponding chained-dollar value, multiplied by 100. The values of the IPD are very close to the values of the corresponding "chain-type" price index for all periods.)

Chain-type quantity and price indexes for GDP and its major components are presented in this release as index numbers in table 5 and in the form of percentage changes from the preceding period in tables 1, 4, 6 and from the quarter one year ago in table 7. Contributions by major components to changes in real GDP are presented in table 2. BEA also prepares measures of real GDP and its components in a dollar-denominated form, designated "chained (1996) dollar estimates." For GDP and most other series, these estimates, which are presented in table 3, are computed by multiplying the 1996 current-dollar value by a corresponding quantity index number and then dividing by 100. For example, if a current-dollar GDP component equaled \$100 in 1996 and if real output for this component increased 10 percent in 1997, then the chained (1996) dollar value of this component in 1997 would be \$110 (\$100 x 1.10).

For analyses of changes over time in an aggregate or in a component, the percentage changes calculated from the chained-dollar estimates and from the chain-type quantity indexes are the same; any differences will be small and due to rounding. However, because the relative prices used as weights for any period other than the reference year differ from those used for the reference year, the chained-dollar values for the detailed GDP components will not necessarily sum to the chained-dollar estimate of GDP or to any intermediate aggregate. A measure of the extent of such differences is provided by a "residual" line, which indicates the difference between GDP (or another major aggregate) and the sum of the most detailed components in the table. For periods close to the reference year, when there usually has not been much change in the relative prices that are used as weights for the chain-type index, the residuals tend to be small, and the chained (1996) dollar estimates can be used to approximate the contributions to growth and to aggregate the detailed estimates. As one moves further from the reference year, the residual tends to become larger, and the chained-dollar estimates become less useful for analyses of contributions to growth. Thus, the contributions to percent change shown in table 2 provide a better measure of the composition of GDP growth. In particular, for components for which relative prices are changing rapidly, calculation of contributions using chained-dollar estimates may be misleading even just a few years from the reference year.
